

# Installation Services

## SERVICE

Prihoda have CHAS Construction Health and Safety certification and our installation teams are fully certified and trained by us in all of our different installation options.

Our teams all carry CSCS cards and have IPAF licences for any powered access plant we need to hire to undertake the project.

We will visit site, complete a survey, take responsibility for our measurements and advise on connections or any alterations that may be required to facilitate the installation.

Weekends and out of hours/night working are not a problem.

Prihoda will provide all necessary Risk & Method statements.

## WHY

From simple and free installation advice on site, to a full installation service Prihoda have the flexibility and experience to provide you with the support and confidence you need.

Prihoda systems are not complicated to install but we often have customers who like to package supply and installation into one area of responsibility or simply don't have the time or resources to go through the learning curve.

Prihoda can provide you with a professionally installed system, designed to be it's most aesthetic and conforming to all warranty requirements.

## We have a wide range of installation animations

# Maintenance and Washing Services

## HOW

It's usual to have a spare set of fabric ducts so that we can remove dirty ducts and replace with clean during the same visit—the reduction in time and plant hire create more than enough savings to cover the cost of a spare set of ducts.

All ducts from the same system are washed together to avoid any contamination with ducts from other systems/clients.

A pre-wash inspection is carried out to look for any damage and then we wash and dry the ducts at low temperatures and spin speeds. Prihoda also offer an optional "anti-bacterial and anti-mould" wash (included as standard for food factory clients). Clean laundry is then bagged and labelled, ready for delivery or storage.

## WHY

Although Prihoda ducts need washing less often than High Dust Capacity (HDC) alternatives, every duct needs to be cleaned eventually.

We set up our own in house laundry because we discovered our food manufacturing customers were replacing ducts due to shrinkage and damage through poor washing practices – Fabric Ducts require a higher level of care.

Prihoda are now providing **rotational maintenance contracts** for Food, University and other manufacturing customers all across the country. It's called Prihoda Care.

## CARE

We can repair material damage and broken zippers if required and we will photograph and advise of any damage or wear issues prior to washing.

All ducts are folded and bagged in new, clean, clear plastic bags with labels to clearly identify the contents.

Washing certificates are issued with each maintenance cycle.

We will wash any fabric ducting system, no matter which manufacturer and can offer replacement / spare systems for any manufacturer or system.
